Legend: yellow = human decision · grey = deterministic · blue = model proposal · red = safe exit

Patient arrives at the OPD triage desk

Nurse records vitals and a one-line complaint
observations only

Deterministic emergency check
clinician-approved protocol
no model · no planner

critical vitals

not critical, or no structured vitals

Structure the note
local model, offline

Match approved SATS discriminators + coverage

Hard bounds
3 steps · one answer round
no repeated action
exhaustion concludes, never guesses

The planner cannot score, approve, or commit
its four actions are read-only

Planner: what next?
model proposes
deterministic guard decides

back to plan, bounded

answer is an observation, not an approval

re-evaluate

finish_investigation
stop investigating

gather_evidence
cited passages

ask_question
one targeted question
from approved definitions

re_extract
re-read the note
never overwrites observations

Immediate cited priority
fast path · skips model and planner

investigation done

Frozen safety kernel
score · ground · verify · recheck · assess

Named clinician
approve · edit · dismiss

unresolved, failed check

approve or edit

dismiss

Gated queue write
only an approval gets here

Safe exits
clarify · re-measure · escalate
no colour · no queue

Sourced handover card

Queue order
approved priority, then arrival time
no AI ranking of patients
